My openssl wasn't working no matter what I did so the code for the post, view and delete are there but because my openssl wasn't making any private and cortication keys I couldn't get it to work with my cluster database that I did make.

Here is my database in mongo dB:

Here is my errors I received for open ssl:

```
PS C:\Users\lab_services_student\downloads\course\OpenSSL-Win64\bin> openssl.exe genrsa -out privatekey.pem 1024
openssl.exe : The term 'openssl.exe' is not recognized as the name of a cmdlet, function, script file, or operable program. Check the spelling of the name, or if a path was
included, verify that the path is correct and try again.
At line:1 char:1
+ openssl.exe genrsa -out privatekey.pem 1024
+ ~~~~~
+ CategoryInfo          : ObjectNotFound: (openssl.exe:String) [], CommandNotFoundException
+ FullyQualifiedErrorId : CommandNotFoundException
```

And here you can see when I change is from openssl to ./openssl still nothing works

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL

● -help : The term '-help' is not recognized as the name of a cmdlet, function, script file, or operable program. Check the spelling of
the name, or if a path was included, verify that the path is correct and try again.
At line:1 char:1
+ -help
+ ~~~~~
+ CategoryInfo          : ObjectNotFound: (-help:String) [], CommandNotFoundException
+ FullyQualifiedErrorId : CommandNotFoundException

PS C:\Users\lab_services_student\downloads\course\OpenSSL-Win64\bin> ./openssl genrsa -out privatekey.pem 1024
PS C:\Users\lab_services_student\downloads\course\OpenSSL-Win64\bin> ./openssl genrsa -out privatekey.pem 1024
PS C:\Users\lab_services_student\downloads\course\OpenSSL-Win64\bin>
```
